

American Guild of Organists
PIPE ORGAN ENCOUNTERS

Brand Guidelines

*Please follow these guidelines to ensure our
logo and brand assets always look their best*

UPDATED 7.29.21

PRIMARY LOGO

The primary full color AGO Pipe Organ Encounters (POE) logo is available in two orientations: **horizontal** and **center stacked**. There is also a third **square** logo option with just the abbreviated text AGO POE. This should be used when a square format is required, or when space restrictions don't allow for use of the horizontal or center stacked versions.

Full color logo, horizontal orientation

Full color logo, center stacked orientation

Full color logo, square orientation

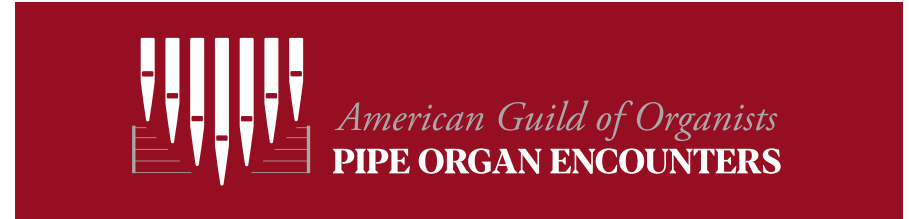

SECONDARY LOGOS

A white/light gray or all black version (available in all orientations) is acceptable to use if it's needed for readability or because of printing limitations.

All black logo, horizontal orientation

The all black version of the logo can be used when only printing in 1-color

white/light gray logo, horizontal orientation

The white/light gray version of the logo can be used when the logo is layered on a color that would make the full color logo unreadable.

LOGO FILETYPES

All logos are available for download in a Google Drive folder named “**AGO POE FINAL LOGO FILES**”.

A link to that folder is below:

https://drive.google.com/drive/folders/1cmP0pKQU7KP_u7pHBTCn32-Wgq32lQpX?usp=sharing

In addition to the vector Illustrator files (.AI) the following file types are available:

For web/screen usage: .PNG, .SVG and .JPG

For print usage: .EPS and .PDF

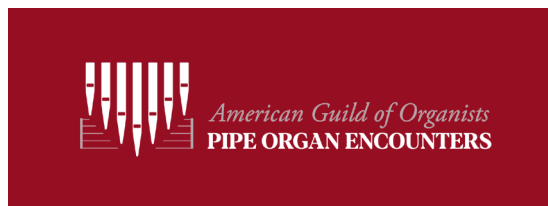

If you need a specific size or file type that isn't included in this folder please email Liz at liz@doublebondstudio.com.

LOGO DO'S

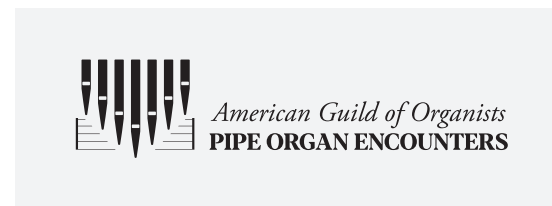

YES

You can use the full color version of the logo layered on top of photographs provided there is a transparent color layer behind it for added contrast.

YES

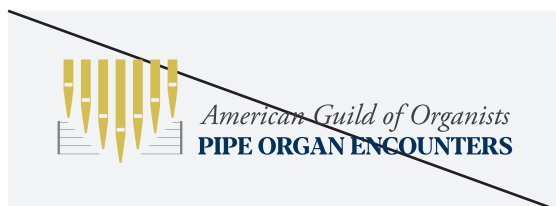

You can use the white/gray version of the logo if there is not enough visual contrast for the full color logo.

YES

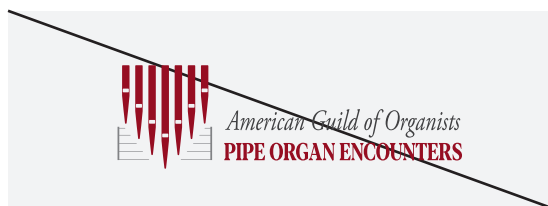

You can use the all black version of the logo if 1-color printing is necessary.

LOGO DONT'S

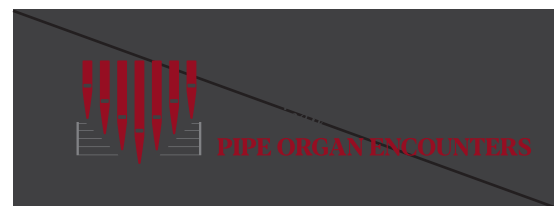

NO

Don't change the colors of the logo

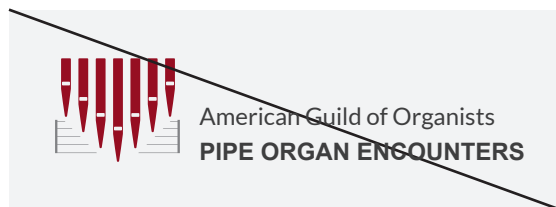

NO

Don't stretch or squeeze the proportions of the logo to fit

NO

Don't place the full color logo on background colors which obscure seeing the full logo.

NO

Don't change the font of the logo

NO

Don't place the logo on backgrounds that are too busy to clearly see the logo

NO

Don't crowd the logo by placing other logos or elements too close

PRIMARY BRAND COLORS

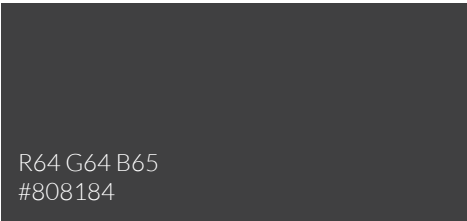

The main colors used in most materials. RGB color formulas and web safe HEX codes are to be used for web and screen materials. For printed materials please use the CMYK or Pantone (PMS) color formulas as noted. If using CMYK formulas the final printed result will depend on the printers color profiles, the printer itself, and the paper it is printing on. The colors may appear different here when viewed on a screen.

RGB COLOR FORMULAS / for web and screen

Main Color

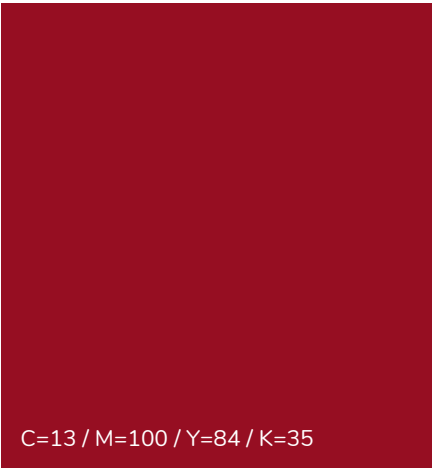

Secondary Color

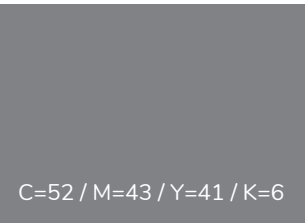

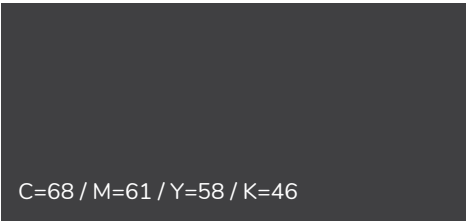

CMYK COLOR FORMULAS / for print

Main Color

Secondary Color

PANTONE (PMS) COLOR FORMULAS / for print

These are the PMS color values for offset printing. Do not use these values for desktop publishing as they will not produce correct results compared to the CMYK formulas. **PMS color values should only be used when printing offset.** The “C” at the end of the formula indicates this is formulated to be used on coated papers.

QUICK GUIDE TO LOGO FILE TYPES AND COLOR SPACES

With all the different file types, a helpful guide is included below to explain each file type and when to use them.

 File types for digital purposes
 File types for print purposes

VECTOR FILES

AI ADOBE ILLUSTRATOR

AI is a proprietary vector-based file format by Adobe Systems. It is the standard source file for your logo. Some print shops will request this file when prepping a project for print.

EPS ENCAPSULATED POST SCRIPT

Like a PDF, an EPS can be edited with any vector graphics program. Although it's becoming outdated, some print shops with older software will still request these files so they're good to have on hand.

PDF PORTABLE DOCUMENT FORMAT

Another editable vector-based file format. Its universal file format makes it extremely versatile. It's typically used for printing and easily sharing documents online.

SVG SCALABLE VECTOR GRAPHIC

SVGs are great for websites or apps to keep logos and icons sharp and are infinitely scalable without pixelation.

JPG JOINT PHOTOGRAPHIC EXPERTS GROUP

A popular image format that is commonly used for photographs and web graphics. Its lossy compression allows for smaller file sizes than PNG, but does not support transparent backgrounds.

PNG PORTABLE GRAPHICS NETWORK

Another image file format that is great for web graphics and digital displays. **Supporting transparent backgrounds** is a key advantage over JPEG, but file sizes are typically larger.

COLOR SPACES

RGB DIGITAL (RED, GREEN, BLUE)

The color space for digital displays. These files are used for the digital purposes such as web graphics or photographs. Printing RGB files can result in blurry images with inaccurate colours. Use CMYK or Pantone files for printing purposes

CMYK PRINT (CYAN, MAGENTA, YELLOW, BLACK)

CMYK stands for Cyan, Magenta, Yellow, and Black. These are the four basic colours used for printing. CMYK files are for any project that will be physically printed such as business cards or brochures. They are not for screen use.

PANTONE/SPOT OFFSET PRINT

Pantone is a standardize system for colour. Unlike CMYK, A Pantone or spot colour is a single colour created from a precise mixture of inks. Their colour accuracy is superior to CMYK, but can become costly using more than three colours. Pantone/Spot colors can only be accurately produced by professional printers. For desktop publishing use CMYK.

BRAND TYPEFACES

The fonts used for most communication and marketing materials are **Lato** and **Blacker Pro**.

BLACKER PRO DISPLAY BOLD (decorative font for headlines)

Blacker Pro is available for purchase from MyFonts.com at <https://www.myfonts.com/fonts/zetafonts/blacker-pro/>
Other font styles and weights are available however we are currently only using the “Display Bold” weight.

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Suspendisse cursus mi at libero ullamcorper, et tempus ipsum consectetur. Fusce vulputate tristique arcu, nec euismod dolor volutpat at. Sed euismod ultrices elit sit amet accumsan. Vestibulum tincidunt magna sapien, vel fringilla ligula hendrerit at. Sed nec commodo enim, elementum luctus libero. Donec porta nulla eget ex euismod dignissim. Duis in congue mauris. Proin tristique pulvinar erat id posuere. Nam ultrices nunc diam, nec pharetra risus sollicitudin ac.

TYPEFACE USAGE

There are times when one or both of the main brand fonts aren't available. For example, you need to make a document in Ms Word and don't have the brand fonts installed. The following chart will help determine the correct fall-back fonts to use:

	WEB	PRINT	GOOGLE DOCS / SLIDES*	MICROSOFT	EMAIL
TITLES/HEADLINES	DM Serif Display	Blacker Pro Display Bold	DM Serif Display	Garamond	Serif Bold
BODY COPY	Lato	Lato	Lato	Open Sans	Sans Serif Regular

* If you don't already have **Lato** or **DM Serif Display** installed in **Google Docs / Slides**, you can do so by following these steps:

- 1. Click on the font drop down menu and select "More Fonts"
- 2. Type in the Google font you want; It should appear below
- 3. Click on the font so that it has a blue check mark
- 4. Click "OK"

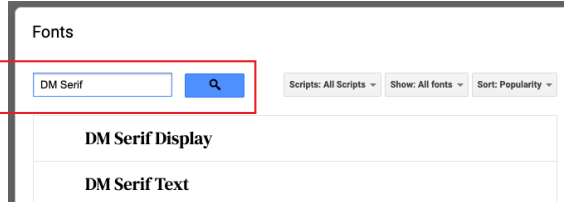

The new font should be ready to use! It will be found in the usual font drop down menu.

1.

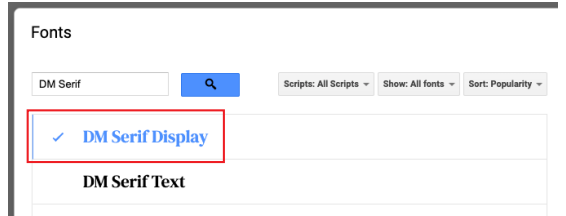

A screenshot of the Google Docs font selection interface. At the top, the current font is 'Times New Roman' with a size of 52. Below this, a 'More fonts' button is highlighted with a red rectangular box. A list of 'RECENT' fonts is visible below, including Times New Roman (checked), Open Sans, Verdana, Roboto, and Nunito.

2.

A screenshot of the Google Fonts website search results. The search bar contains 'DM Serif' and a magnifying glass icon. Below the search bar, the results list 'DM Serif Display' and 'DM Serif Text'. The 'DM Serif Display' entry is highlighted with a red rectangular box.

3.

A screenshot of the Google Fonts website search results, similar to step 2. However, the 'DM Serif Display' entry now has a blue checkmark to its left and is highlighted with a red rectangular box, indicating it has been successfully added to the user's font collection.
